Hampton, NH | jones@vicinus.com | (603) 479-5890 | linkedin.com/in/jonesvicinus

EDUCATION

University of South Carolina - Molinaroli School of Engineering & Computing **Columbia, SC**
Bachelor of Science in Computer Science | GPA: 3.88 *Expected May 2028*
Concentration: Artificial Intelligence | **Minor:** Business Administration | **Certificate:** Data Analytics and Visualization
Coursework: Artificial Intelligence, Computer Networks, Operating Systems, Software Engineering, Data Structures
Awards: Capstone Scholar, President's Honors List, Dean's Honor List (3x), Club Baseball DII Dixie Region Champion

PROFESSIONAL EXPERIENCE

Snapshot Photo Albums - *Software Engineer (Freelance)* *June 2026 – Present*

- Inherited a mobile-only app in development since 2022 and never launched: assessed the codebase, extended its Elixir/Phoenix and PostgreSQL API, and rebuilt the customer site as a 29,000-line Next.js/TypeScript storefront.
- Partner with the non-technical founder in working sessions to gather requirements, document decisions, and translate business goals into a prioritized build plan and a fulfillment export producing print-ready files.
- Built the full stack of the live site: print-accurate album editor, Stripe PaymentIntents confirmed by webhook, background photo uploads to AWS S3, a shared photo library, and authorization hardening across the API.
- Wrote roughly 400 automated unit and end-to-end tests (Vitest, Playwright, ExUnit), ship tagged releases to AWS through a GitHub Actions pipeline, and presented the rebuild to the Bowst team as a case study.

Bowst (Software Agency) - *Software Developer Intern*, Portsmouth, NH *May 2026 – August 2026*

- Scoped a data-quality problem with agency leadership for Help Hope Live, then built a Python matching engine linking 12,000+ providers and 3,500+ centers to the 7M-row NPI registry with weighted fuzzy matching.
- Designed the SQLite and PostgreSQL schema and fuzzy-match indexes for the registry import, wrote the SQL behind match scoring, delivered confidence-tiered matches to a staff review site, and supported the client presentation.
- Built AI tools that keep staff in the loop: a GPT-4o conversational registry lookup, a GPT-4o vision tool drafting SEO metadata, and a Document AI reader turning handwritten forms into review-ready orders (98.5% recall).
- Wrote and executed 200+ test cases, documented the root cause and fix options for a production Twilio SMS scheduling defect, supported WordPress migrations and Netlify deploys, and presented AI tooling to the team.

PROJECTS

ClearCash, *myclearcash.com* - *Founder & Developer* *April 2026 – Present*

- Built and operate a live personal finance web app with active users: budgets, savings goals, income and expense tracking, OCR statement import, money-flow visualizations, stock positions, and learned merchant categorization.
- Next.js/TypeScript on Supabase/PostgreSQL with Google OAuth and row-level security; GitHub Actions CI lints, type-checks, tests, and builds on every push, with zero-downtime SQL-first migrations across dev and production.

Virtual Escape Room - *Project Manager & Developer*, CSCE 247 *August 2025 – December 2025*

- Project manager for a 4-person Agile team shipping a Java/JavaFX escape room game in weekly sprints: five puzzle types, non-linear room unlocking, a timer with pause and checkpoints, inventory, and a persistent leaderboard.
- Authored the 12-page software requirements specification (use cases, functional and non-functional requirements) and UML sequence diagram; wrote JUnit suites within a 292-test codebase across 170+ pull requests.

LEADERSHIP EXPERIENCE

Beta Theta Pi - *Professionalism Committee*, Columbia, SC *August 2025 – Present*

- Plan and deliver career workshops every 2 weeks for 50+ new members: resumes, interviews, and recruiting.
- Coach 15 new members one on one on goals, timelines, and applications; 8 joined selective campus groups.

TECHNICAL SKILLS & INTERESTS

Languages: Python, C/C++, Java, TypeScript, JavaScript, SQL (PostgreSQL, SQLite), Elixir, HTML/CSS
Frameworks & Tools: React, Next.js, Node.js, Phoenix, REST APIs, Supabase, AWS, Linux, GitHub Actions, Git
AI & Testing: PyTorch, GPT-4o, Document AI, AI-Assisted Development, Vitest, Playwright, ExUnit, JUnit, CI/CD
Concepts: Deep Learning, OOP, Algorithms, Requirements Gathering, Data Modeling, Agile/Scrum, UML
Interests: Personal Finance and Investing, Baseball, Boston Sports, Weightlifting, International Travel, Card Games
